

I urge you not to approve deployment of "Broadband over Power Line" as this will severely jeopardize High Frequency(HF) broadcast by Amateur Radio operators. There are presently approximately 650,000 Amateur Radio operators in the United States alone that use and enjoy HF broadcasting to other Amateur Radio operators around the world. Amateur Radion enthusiasts are also always willing to do their part to help authorities restore order, and protect life and property in times of local and national emergencies when normal telecommunications are out of service. In these uncertain times of terrorist attacks and war, let us make sure that we keep all channels of Ammateur Radio Communications open. Thank you very much.
